

ALPHABETICAL ORDER

Create a function which takes every letter in every word, and puts it in alphabetical order. Note how the **original word lengths must stay the same**.

Examples

TrueAlphabetic("hello world") → "dehll loorw"

TrueAlphabetic("edabit is awesome") → "aabdee ei imosstw"

TrueAlphabetic("have a nice day") → "aaac d eehi nvy"

Notes

- All sentences will be in lowercase.
- No punctuation or numbers will be included in the **Tests**.
